Own funds/Capital ratio	3.262,4	4,9%	5.204,1	10,2%
Model				

Arbejdernes Landsbank applies the 8+ method to set the individual solvency need for both the Group and the Bank.

The method is based on the minimum capital requirement of 8% of total risk exposure (Pillar I requirement). It is assumed that normal risks are covered by the 8% capital requirement. In addition, Tier 2 capital needs are calculated for risk areas that are deemed not to be covered by the 8% requirement. The total capital need is obtained by adding together the capital need according to the 8% requirement and the Tier 2 capital needs.

The model is based on the guidelines on sufficient own funds and solvency need for credit institutions (Vejledning om tilstrækkelig kapitalgrundlag og solvensbehov for kreditinstitutter) issued by the Danish FSA.

The solvency need is calculated as the total capital need as a percentage of the total risk exposure calculated according to the provisions of the CRR.

Capital to cover credit risk

The capital requirement to cover credit risk is calculated as 8% of the risk exposures relating to credit risk plus Tier 2 capital to cover risks that are not adequately covered by the minimum capital requirement. As at 31 March 2025 Arbejdernes Landsbank allocates Tier 2 capital to the following risks:

1. Concentration risk on the 20 largest exposures
2. Large exposures with financial problems
3. Sector concentration risk
4. NPE backstop
6. lending growth
6. Shares etc. outside the trading portfolio
7. Other credit risks

Capital to cover market risk

The capital requirement to cover market risk is calculated as 8% of the risk exposures relating to market risk plus Tier 2 capital to cover risk that are not adequately covered by the minimum capital requirement. As at 31 March 2025 the Arbejdernes Landsbank allocates Tier 2 capital to the following risks:

1. Credit spread risk
2. Interest-rate risk inside and outside the trading portfolio

Capital to cover operational risk

The capital requirement to cover operational risk is calculated as 8% of the risk exposures relating to operational risk in accordance with Part Three, chapter 3 of the CRR. In addition the Group allocates Tier 2 capital to cover risks that are not adequately covered by the minimum capital requirement based on a model in which the different units in the Group construct a number of risk scenarios.

Capital to cover other risks

Capital to cover other risks includes, among others, assessments of capital requirements for the level of earnings, leverage, risk of falling prices on owner-occupied and investment properties, as well as other aspects, including statutory requirements.
